Steps to run ESP32

1 - We create a definition for it File , then preferences , then copy the library link , then put it in the

2 - preferences .

3 - We click Tools , then Board , then Board Manager , then type ESP32 , then install , then close - A file , then an example , then BASIC , then Blink , and then we try to

4 - program it .

5 - Select the board , go to Tools , then Board , then WEMOS .

6 - To make a definition for the port , connect the board to

the computer via a cable . Once the board is connected ,

go to Tools , then Port , then COM8. Once the code file is downloaded , the LED will start blinking
